Point	Comment
Check only .gv file for diagram validation	QACoverageTool is using graphviz to build graphs. This library generates two files related to graph according to current configuration: 1) graph_name.gv - dot-language file that describe a diagram 2) graph_name_gv.pdf - PDF file with diagram based on dot-name file Due to graphical part of output is depends on .gv file there is possible to validate only .gv file due to dot translation is part of graphviz library directly. Not a part of QACoverageTool As per the assuming above dot transation to graph is already tested in graphiz library
Temporay check only xlsx file for path statistics	Validations for graphical representation of path statistics have a low priority so this check is temporary halted

Parameter	Ranges	ClassName	ValueToCheck
Sequence	1	Single	1
	2:inf	Multiple	2
Object	1	Single	1
	2:inf	Multiple	2
Transitions	1	Single	1
	2:inf	Multiple	2
States	1	Single	1
	2:inf	Multiple	2

				Multiple configs are exluded due to this value is not related for this suite
Sequencer	Object	Transitions	States	ConfigsCountAsArgument
Single	Single	Single	Single	Single
Multiple	Multiple	Multiple	Multiple	Multiple
